Summary

Biomedical Informatics student (5th semester at Federal University of Paraná) with hands-on experience in Machine Learning, Computer Vision, and full-stack development. Skilled in Python, SQL, TypeScript/React, Node.js, and C++, with experience building end-to-end web and desktop applications for healthcare and geoinformation domains. Co-developer of the INPI-registered software ADSProcSuite, focused on workflow automation and algorithm optimization. Strong interest in image processing, data-driven systems, and applied AI.

Professional Experience

Esteio Engenharia e Aerolevantamentos S.A. | Software Development Intern

Jun/2025 – Present

- Developing desktop software in C++ and Python, focusing on processing data from ADS80/100 sensors.
- Designing and optimizing high-performance algorithms for orthophoto processing.
- Implementing automated routines in VCLPY for geospatial data manipulation and processing.

UFPR / Center for Applied Research in Geoinformation | Research / Intern

Sep/2024 – Sep/2025

- Developed a web-based system to manage and streamline the intern hiring process.
- Acted as a Full Stack Developer utilizing React (Frontend), Spring Boot (Backend), and PostgreSQL (Database).
- Built desktop applications using VCLPY (Visual Component Library), integrating Python scripts with graphical user interfaces (GUIs).

Hospital Erasto Gaertner | IT Intern

Dec/2024 – Mar/2025

- Developed Python scripts for Varian ARIA software, automating workflows for medical physicists.
- Created custom solutions to optimize and streamline radiation therapy scheduling.
- Implemented automated routine testing and validation for hospital medical equipment.

Education

- **B.S. in Biomedical Informatics | Federal University of Paraná (UFPR) |**
Expected Graduation: Jul/2028

Projects and Registrations

- **ADSProcSuite (INPI Registration: BR512025004424-0):** Co-developer of a specialized software solution for aerial and photogrammetric data processing (ADS 80/100 Sensors), built with C++ and Python. ([Website](#))
- **Brain-Tumor-Segmentation-UNet:** Personal Deep Learning project focused on the automated detection and segmentation of gliomas in Magnetic Resonance Imaging (MRI). Utilized advanced computer vision techniques to support diagnostic analysis. ([Repository](#))
- **X9 Acadêmico — x9academico.com.br:** Platform for UFPR students to rate professors by teaching style and classroom characteristics, helping with course selection. 600+ users and 1,229 professors across 20 departments. React, TypeScript, Vite and Tailwind CSS, Supabase (PostgreSQL, Auth, Edge Functions and Realtime). ([Website](#))

Technical Skills

- **Languages:** Python, C++, C#, Java, JavaScript, TypeScript, SQL
- **AI & Computer Vision:** Deep Learning, Image Segmentation, OpenCV, Image Processing
- **Software Engineering:** Full-stack development, OOP, Desktop Applications, REST APIs
- **Frameworks & Tools:** React, Node.js, Spring Boot, PostgreSQL, Git, VCLPY
